Notes for 2012 blood lead data

Data from RASSCLE surveillance database archive of 12/17/2014

* Measures are in µg/dL (micrograms per deciliter) of whole blood

All results of blood lead analyses are reportable under California law, and the State works to ensure complete reporting.
   Results that are not submitted to the State, however, would not be included here.

Those blood lead levels reported from the analyzing laboratory as "< 5 µg/dL" are included in the category "BLL < 4.5"

Each individual is counted only once, using their highest blood lead level during 2012.

If an individual moved between two jurisdictions, then the child's residence at the time of their highest
   blood lead level is the one counted.

Results later determined to be false positives or errors have been excluded.

Data should be considered as preliminary and subject to revision.
